

Figure S16: TRIBE-MCL clusters for *B. subtilis*. Clusters were generated by the TRIBE-MCL method using the default inflation parameter, $I = 2.0$.

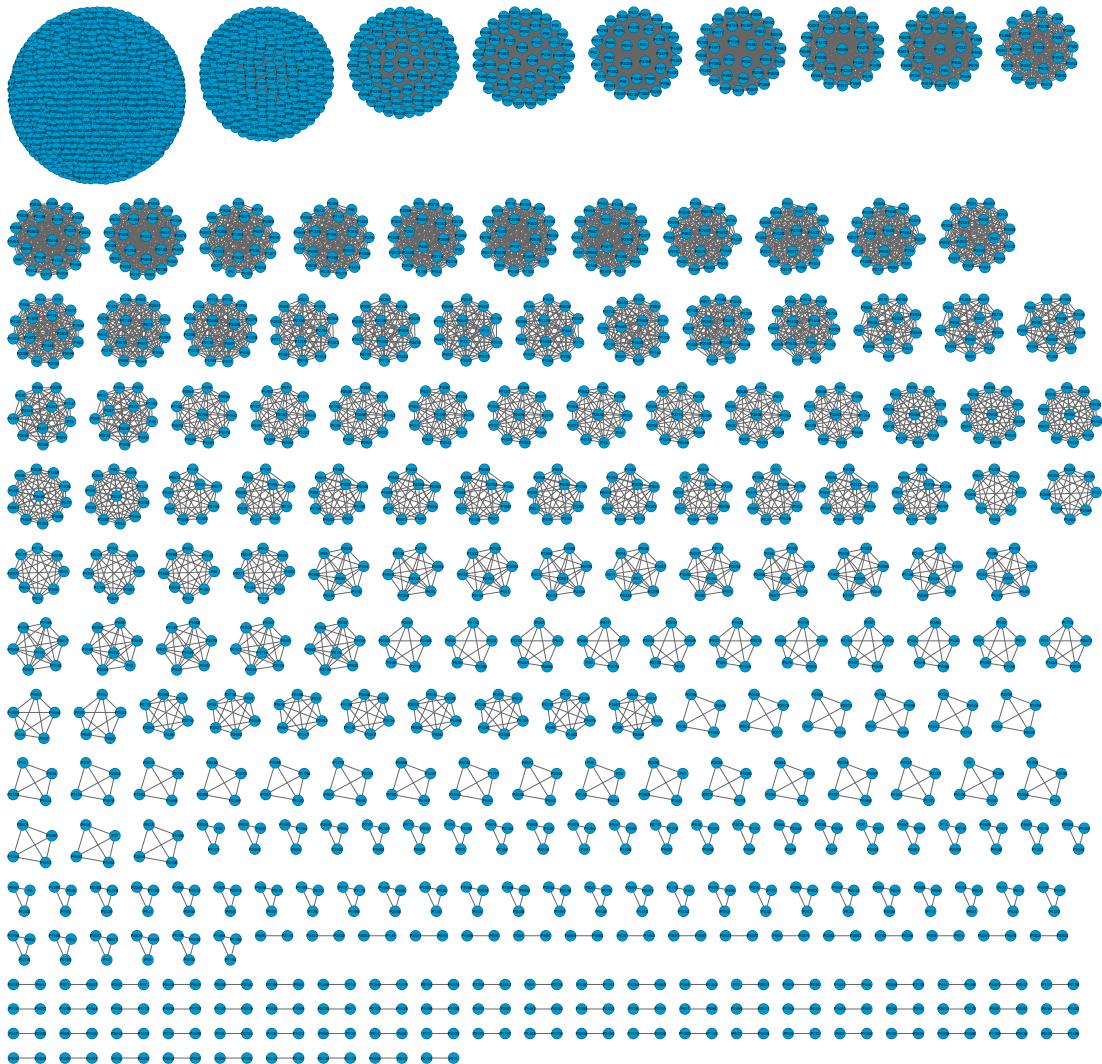

Figure S17: TRIBE-MCL clusters for *E. coli*. Clusters were generated by the TRIBE-MCL method using the default inflation parameter, $I = 2.0$.

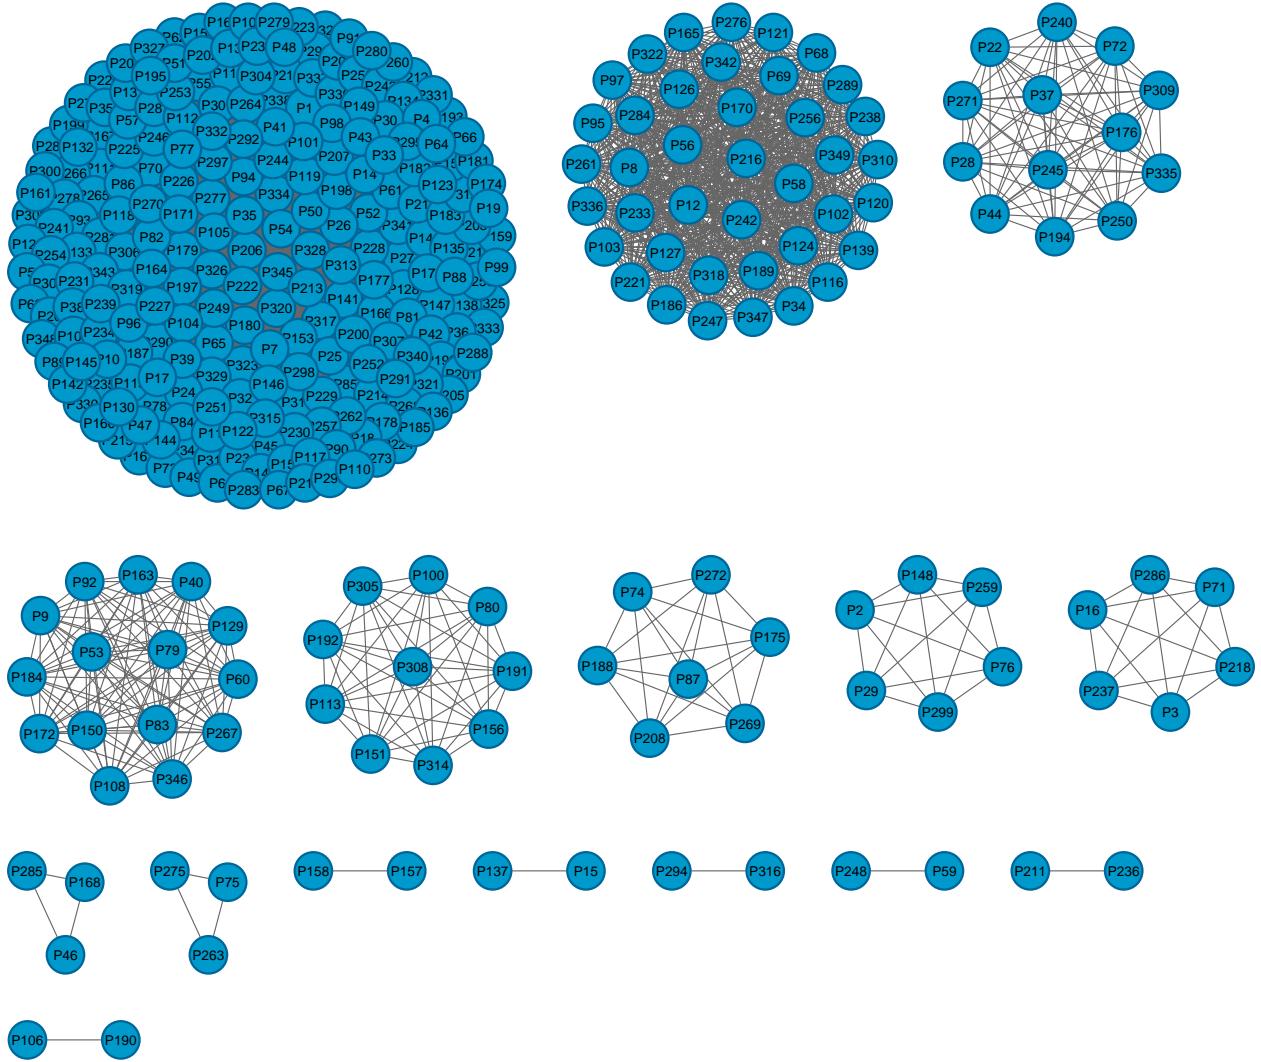

Figure S18: TRIBE-MCL clusters for *T. pallidum*. Clusters were generated by the TRIBE-MCL method using the default inflation parameter, $I = 2.0$.

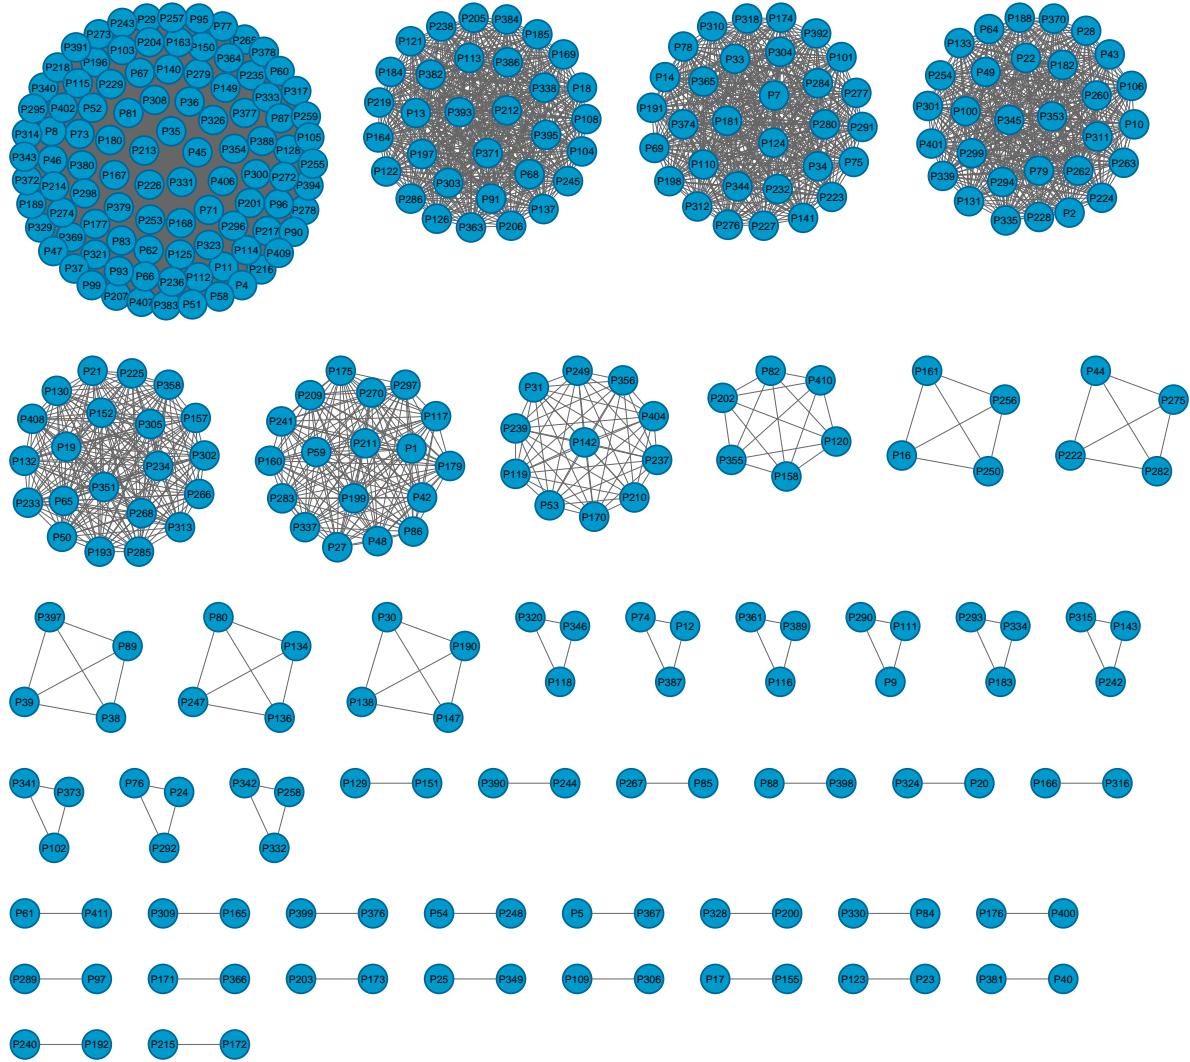

Figure S19: TRIBE-MCL clusters for *Str. pyogenes*. Clusters were generated by the TRIBE-MCL method using the default inflation parameter, $I = 2.0$.

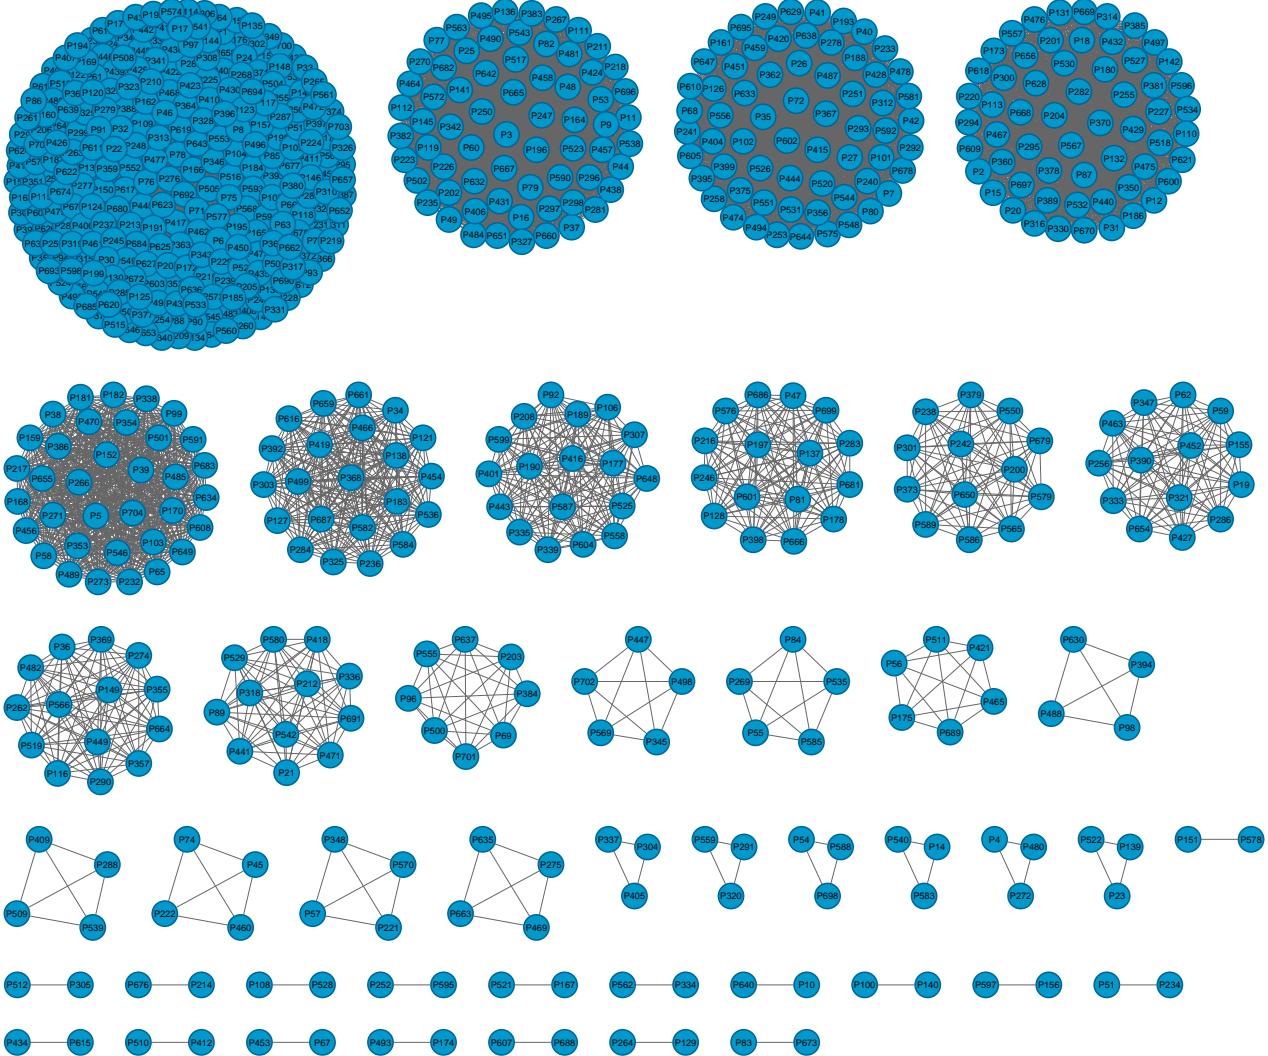

Figure S20 : TRIBE-MCL clusters for *Sta. epidermidis*. Clusters were generated by the TRIBE-MCL method using the default inflation parameter, $I = 2.0$.

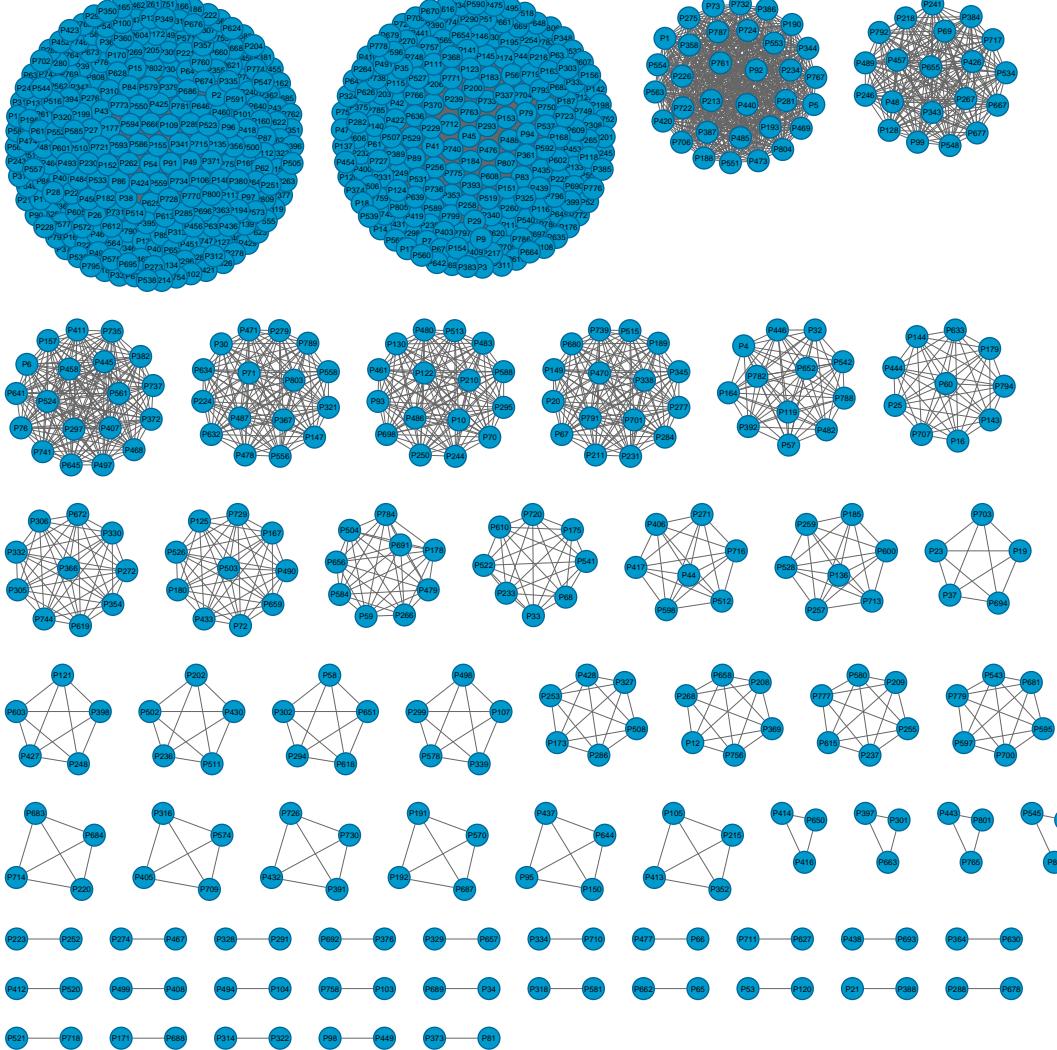

Figure S21: TRIBE-MCL clusters for *Sta. aureus*. Clusters were generated by the TRIBE-MCL method using the default inflation parameter, $I = 2.0$.

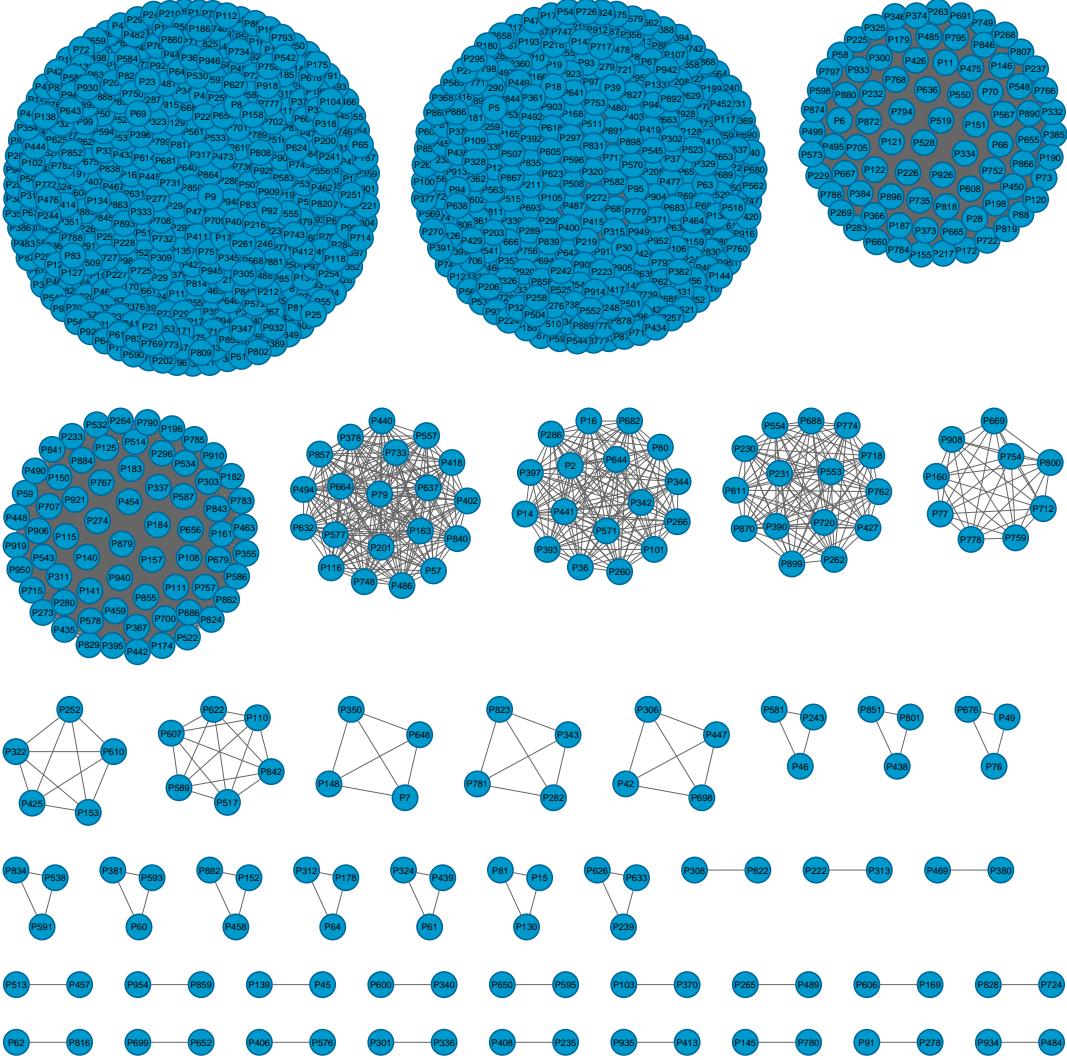

Figure S22: TRIBE-MCL clusters for *Y. pestis*. Clusters were generated by the TRIBE-MCL method using the default inflation parameter, $I = 2.0$.

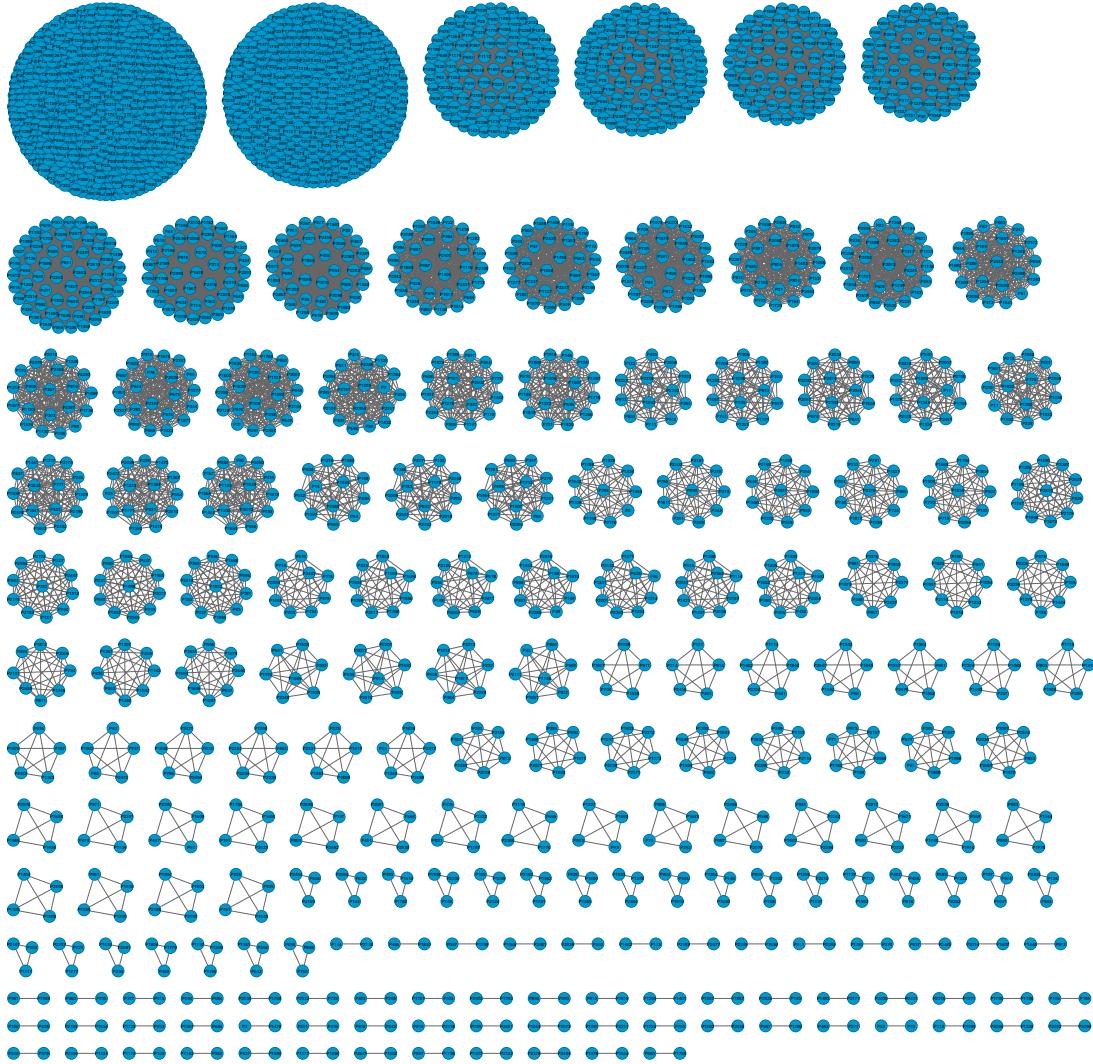

Figure S23: TRIBE-MCL clusters for *D. melanogaster*. Clusters were generated by the TRIBE-MCL method using the default inflation parameter, $I = 2.0$.

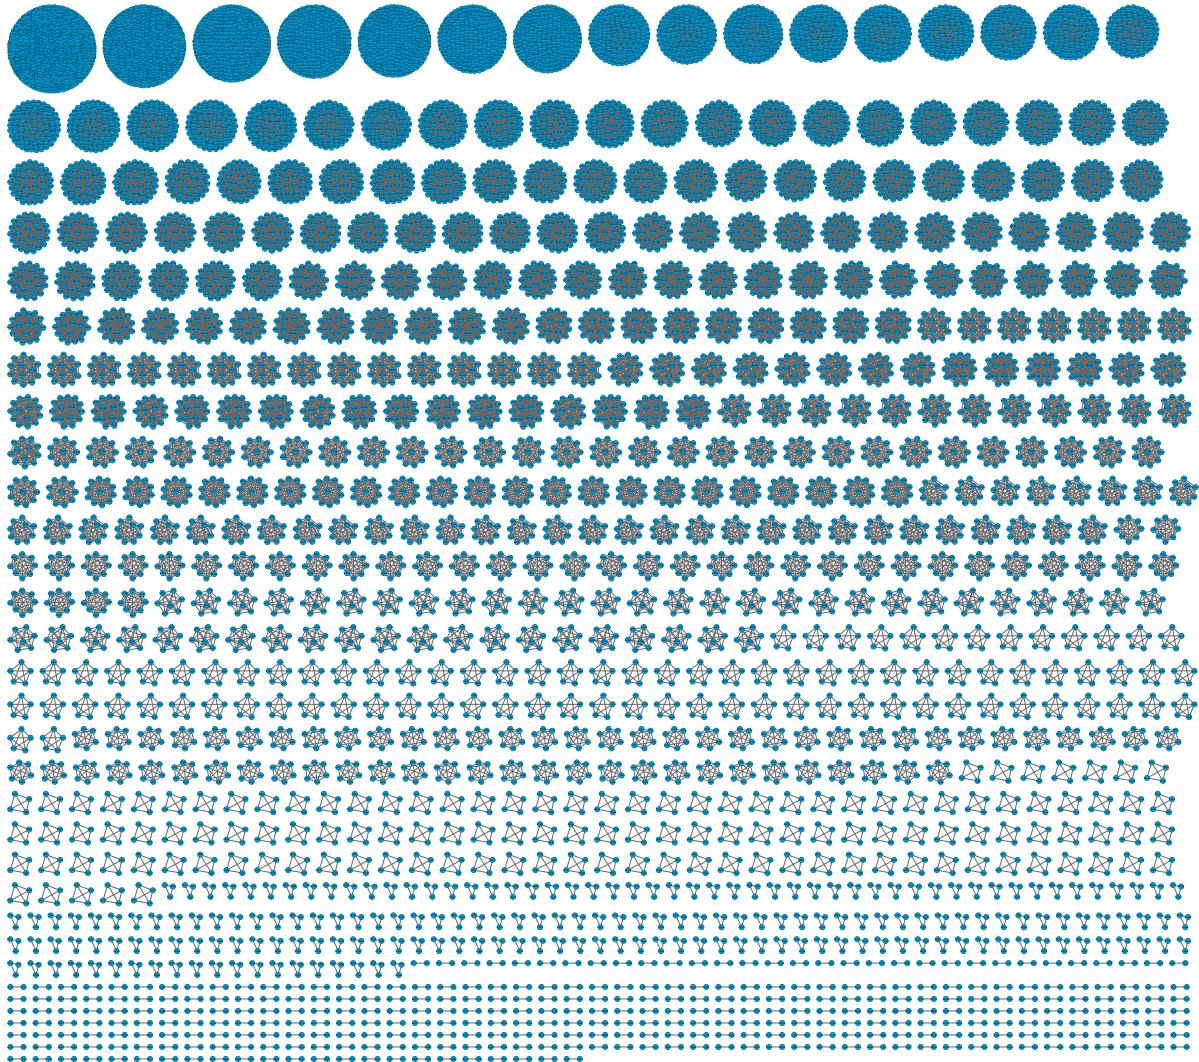

Figure S24: TRIBE-MCL clusters for *M. musculus*. Clusters were generated by the TRIBE-MCL method using the default inflation parameter, $I = 2.0$.

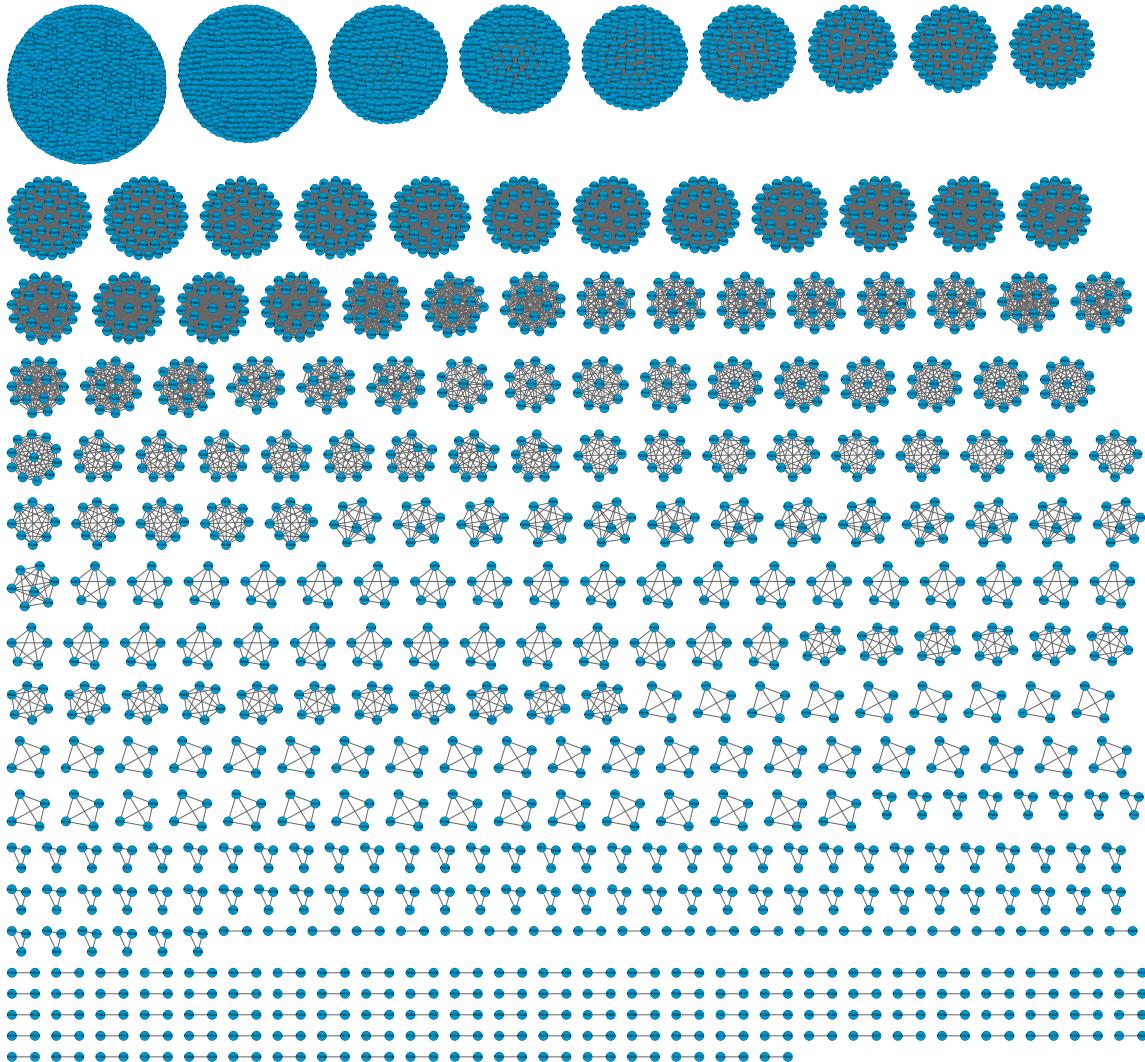

Figure S25: TRIBE-MCL clusters for *Sa. cerevisiae*. Clusters were generated by the TRIBE-MCL method using the default inflation parameter, $I = 2.0$.
